

**LEADERS IN NON-CONTACT
INFRARED THERMOMETRY**

**Infrared measurements
you can clearly see.**

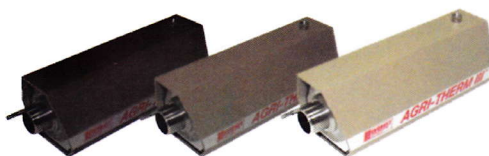

Our exclusive **Light Sighting Technology™** allows you to see the EXACT SPOT where you are measuring while other companies use laser and other sighting methods which do not exactly correspond to the measurement area. In addition traditional means for measuring surface temperature like thermocouples, RTDs, and thermistors only measure the point where they come in contact with the surface - Everest sensors, however, measure the entire surface area. Everest has a long tradition of supporting a wide range of applications in research, development, and manufacturing.

Contact us today to learn how we can support your temperature measurement needs.
